

# ST. MARY'S HOSPITAL

WEST PALM BEACH, FLORIDA

Project began as small test floor at a pedestrian bridge inside the hospital on the 2nd floor. The existing floor covering was failing & very difficult to clean on the sloped walkway. Test floor performed so well that the various products were added to St. Mary's new standards package. Project was specified by Saltz Michelson & Associates.

This St. Mary's Hospital received a design and performance makeover including playful footprints that were added to compliment the surroundings - inside the pediatrics wing of the hospital there is a dinosaur inside a large atrium on display.
